pandoc-pdf-template

This repo contains a Latex template file for Pandoc to generated a decent looking PDF right off the bat. If you have any recommendations, or tweaks to make it better, please let me know. I would love to hear from you.

Dependencies

- pandoc
- A TexLive package.

Note: On a Mac, I used BasicTex with the packages below installed using `tlmgr`.

Tex Packages:

- tocloft
- textpos
- changepage
- titling
- placeins
- lastpage
- sectsty

Command

```
pandoc --latex-engine=xelatex --template={/path/to/w8sPDF.template} -V subject="{subject}" -V
keywords="{keywords}" -V today="{today}" -V subtitle="{subtitle}" -V draft="{draft}" -V color="{color}"
-V iconpath="path/to/icon.png" -V brandingpath="path/to/brandingfile.eps" -f markdown+auto_identifiers
--toc -o "{subtitle}.pdf" {mdfile}"
```

Helper Script

I included a Python script that will run the above command using keywords you define in the script. I find it's a bit easier to use that.
